

RELEASE NOTES

Product	Snow Inventory Agent for Linux
Version	6.1.1
Release date	2019-06-26
Content	Enhancements Corrections

ENHANCEMENTS

The following features have been implemented in Snow Inventory Agent 6.1.1 for Linux:

Support for TLS 1.3

The Snow Inventory Agent for Linux now supports the TLS 1.3 protocol when communicating with the configured endpoints. This capability is not supported in Inventory Server yet.

CORRECTIONS

The following corrections have been implemented in Snow Inventory Agent 6.1.1 for Linux:

- When retrieving the login events on some Linux distribution, the agent incorrectly appended the login date to the username, resulting in incorrect entries for the user list. The logic of this functionality has been corrected, and users are now reported with the correct name (PRB0042373).
- The agent will now report the system enclosure type as unknown (value of 2) when the relevant data can't be read.
