| Product      | Snow Inventory Oracle Scanner |
| Version      | 5.0.1                         |
| Release date | 2017-11-02                    |
| Content      | Enhancements<br>Corrections   |

## ENHANCEMENTS

The following enhancements have been introduced in Snow Inventory Oracle Scanner, version 5.0.1:

- Detection checks have been added for a number of Oracle options:
  - Active Data Guard – Global Data Services
  - Advanced Security – Data Redaction
  - Advanced Compression – Heat Map
  - Database Vault – Privilege Analysis
  - Real Application Clusters (RAC) – Quality of Service Management
  - RAC One Node – Quality of Service Management
  - Partitioning – Zone Maps
- A new debug setting has been added to the configuration file. When enabled, this setting includes intermediary data gathered from the environment in the resulting snowpack, which can be used for diagnostics purposes.
- To improve troubleshooting, the log file now contains both the type and message of a thrown exception.

## CORRECTIONS

The following corrections have been made in Snow Inventory Oracle Scanner, version 5.0.1:

- Oracle option names are now reported correctly (PRB0041107).
- Connection issues with Oracle 9i databases have been resolved by encapsulating logon credentials using quotation marks (PRB0040121).
- Minor corrections have been made to the scripts used to query the Oracle database.
